

EDS Midrange Management Services

Midrange computing services that meet your e-business goals

Scalable services deliver the speed, power, and flexibility to compete in the digital economy

Features

Systems design, implementation, integration, and testing

Platform-independent infrastructure server solutions, including asset management and procurement options

Integrated systems, workload, software, and hardware-configuration management

Advanced security, business continuity, and client service management

Optional storage area network (SAN) management

Benefits

Create a flexible, scalable, stable e-infrastructure

Integrate new e-enabled applications rapidly while protecting your legacy investments

Command a stronger e-business and market presence

Achieve operational and service excellence, along with consistent delivery, cost efficiency, and peak technological innovation

Advantages

Gain a trusted ally in EDS to support your overall business and e-commerce strategy

Take advantage of ISO-certified midrange services that support your e-business evolution

Enjoy the speed, reliability, and cost-efficiency of modular service packaging

Grow your business while managing compute-related IT costs

Overview

Harness the power you need for e-business

Tap into the rich resources of your legacy systems—or let us design integrated server solutions—to turbocharge your e-business strategy. We've loaded the best of what we've learned from delivering IT services over nearly 40 years into our fully scalable Midrange Management Services. Now you can meet the challenges of e-commerce head on, confident in the power and versatility of a solid, reliable infrastructure.

We spend the time to understand your unique business situation—competition, strategy, and goals—to help you achieve your objectives today ... and tomorrow. Then, we develop the integrated systems configurations—coupled with the right degree of systems management and business continuity—to drive your business where it needs to go.

Benefits and advantages

Establish a strong, scalable, e-enabled infrastructure

Stay flexible with customizable, modular components

Choose a midrange solution that supports your enterprise today. And one that you can count on tomorrow when your market and strategy evolve. With EDS Midrange Management Services, you can add or remove elements to ramp up or achieve efficiencies, depending on your business needs. Flexibility, modularity, and scalability are built into each service level.

Choose the service package that's right for you

Our Midrange Management Services' Essential, Enhanced, and Premier packages offer the right range of services at the right price. Essential service gives you a stable and cost-effective infrastructure environment.

Enhanced service provides capabilities for more rigorous service requirements. And Premier service enables innovative technological capabilities resulting in increased business responsiveness.

Get a business colleague, not a technology vendor

EDS is not just an IT-services provider. We become your ally in both business and technology. The difference lies in our approach. We think in terms of helping you solve your business challenges. Sure, we use information technology to do that. And, with nearly 40 years of experience and thousands of clients the world over, we're simply the best in the IT integration and solutions delivery business. But what we really get excited about is solving business problems. Let us help you solve yours.

It's Working

Integrating technologies leads to World Cup success

World Cup 98 and the 1999 Women's World Cup were miracles of team spirit, individual courage—and precisely integrated technology. EDS supplied the connectivity and access both Cups depended on.

So, how do you coordinate several thousand volunteers? Oversee the accreditation of 100,000 people? Sell 2.5 million tickets electronically? Manage information in real time using hundreds of workstations and dozens of servers spread across several host cities? And handle a record-breaking 50 to 75 million hits per day on the World Cup Internet sites?

EDS' solution: Remote management from a single command center. Standardized hardware, software, and messaging that delivered sharply coordinated media and telecommunications interaction. Solid compute foundations that promoted extremely high productivity. And professional IT teams that brought both Cups in on time and on budget.
